

HEWLETT-PACKARD

HP-67/HP-97

Users' Library Solutions
Geometry

INTRODUCTION

In an effort to provide continued value to its customers, Hewlett-Packard is introducing a unique service for the HP fully programmable calculator user. This service is designed to save you time and programming effort. As users are aware, Programmable Calculators are capable of delivering tremendous problem solving potential in terms of power and flexibility, but the real genie in the bottle is program solutions. HP's introduction of the first handheld programmable calculator in 1974 immediately led to a request for program **solutions** — hence the beginning of the HP-65 Users' Library. In order to save HP calculator customers time, users wrote their own programs and sent them to the Library for the benefit of other program users. In a short period of time over 5,000 programs were accepted and made available. This overwhelming response indicated the value of the program library and a Users' Library was then established for the HP-67/97 users.

To extend the value of the Users' Library, Hewlett-Packard is introducing a unique service—a service designed to save you time and money. The Users' Library has collected the best programs in the most popular categories from the HP-67/97 and HP-65 Libraries. These programs have been packaged into a series of low-cost books, resulting in substantial savings for our valued HP-67/97 users.

We feel this new software service will extend the capabilities of our programmable calculators and provide a great benefit to our HP-67/97 users.

A WORD ABOUT PROGRAM USAGE

Each program contained herein is reproduced on the standard forms used by the Users' Library. Magnetic cards are not included. The Program Description I page gives a basic description of the program. The Program Description II page provides a sample problem and the keystrokes used to solve it. The User Instructions page contains a description of the keystrokes used to solve problems in general and the options which are available to the user. The Program Listing I and Program Listing II pages list the program steps necessary to operate the calculator. The comments, listed next to the steps, describe the reason for a step or group of steps. Other pertinent information about data register contents, uses of labels and flags and the initial calculator status mode is also found on these pages. Following the directions in your HP-67 or HP-97 **Owners' Handbook and Programming Guide**, "Loading a Program" (page 134, HP-67; page 119, HP-97), key in the program from the Program Listing I and Program Listing II pages. A number at the top of the Program Listing indicates on which calculator the program was written (HP-67 or HP-97). If the calculator indicated differs from the calculator you will be using, consult Appendix E of your **Owner's Handbook** for the corresponding keycodes and keystrokes converting HP-67 to HP-97 keycodes and vice versa. No program conversion is necessary. The HP-67 and HP-97 are totally compatible, but some differences do occur in the keycodes used to represent some of the functions.

A program loaded into the HP-67 or HP-97 is not permanent—once the calculator is turned off, the program will not be retained. You can, however, permanently save any program by recording it on a blank magnetic card, several of which were provided in the Standard Pac that was shipped with your calculator. Consult your **Owner's Handbook** for full instructions. A few points to remember:

The Set Status section indicates the status of flags, angular mode, and display setting. After keying in your program, review the status section and set the conditions as indicated before using or permanently recording the program.

REMEMBER! To save the program permanently, **clip** the corners of the magnetic card once you have recorded the program. This simple step will protect the magnetic card and keep the program from being inadvertently erased.

As a part of HP's continuing effort to provide value to our customers, we hope you will enjoy our newest concept.

TABLE OF CONTENTS

SINE PLATE SOLUTIONS	1
Coordinates of a point, position and slope of an inclined hole. This program, with the aid of commonly available dowel pins, measuring tools, (in the case of the sine plate, obviously a sine plate and height blocks), will aid in accurately finding angles, including holes and coordinates of points.	
V NOTCHES AND LONG RADII	8
This program, together with commonly available dowel pins and height gages, will accurately determine the position and angles of "V" grooves or notches. With the same tools, long radii are accurately measured.	
INTERNAL AND EXTERNAL TAPERS	14
This program, used with commonly available dowel pins, height bases, and balls, will accurately determine the position and angle of both external and internal tapers.	
POINTS OF TANGENCY WITH CIRCLES AND ARCS	20
These programs will accurately locate points of tangency between straight lines and arcs, between straight lines and a circle, and between two circles and a straight line.	
LINE-LINE INTERSECTION/GRID POINTS	26
This card will calculate the point of intersection of two lines and the Cartesian coordinates of points in other systems.	
POINTS ON A STRAIGHT LINE	33
This program calculates the coordinates of equidistant points on a straight line.	
GRID OF POINTS: CALCULATES ALL POINTS	37
This program calculates the X and Y coordinates, all the points of a grid.	
GRID OF POINTS: CALCULATE DISCRETE POINTS	42
This program complements "Grid of Points: Calculate all Points". It allows the calculation of specified points of grid.	
TANGENT CIRCLE TO TWO STRAIGHT LINES WITH A GIVEN RADIUS	46
This problem calculates the X and Y coordinates of the center of a circle with a given radius. This circle being tangent to two given straight lines. In the more general case, there are four center solutions to this problem.	
DISTANCE BETWEEN LINES IN SPACE	52
Given two lines, each defined by any two points, program calculates shortest distance between the two lines. (This program was written to determine the clearance between electrical distribution circuits and guy wires or supporting structures.)	

Program Description II

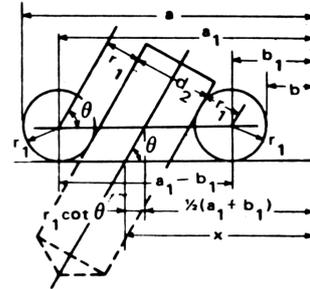

Sketch(es)

Solution for Finding the Location and Angle of an Inclined Hole

Given: a, b, r₁ and d₂, determine θ and x

$$\sin \theta = \frac{2r_1 + d_2}{a_1 - b_1}$$

$$x = \frac{1}{2}(a_1 + b_1) + r_1 \cot \theta$$

Program Description I

Program Title V Notches and Long Radii

Contributor's Name David Stedman

Address 15950 Oakridge Road

City Morgan Hill

State California

Zip Code 95037

Program Description, Equations, Variables

This program, together with commonly available dowel pins and height gages, will accurately determine the position and angles of "V" grooves or notches. With the same tools, long radii are accurately measured.

Operating Limits and Warnings

All angular output is in decimal degrees. Use the H.MS conversion on the calculator to convert back and forth between degrees, minutes and seconds and decimal degrees.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR MAKES ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND WITH REGARD TO THIS PROGRAM MATERIAL, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. NEITHER HP NOR THE CONTRIBUTOR SHALL BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH OR ARISING OUT OF THE FURNISHING, USE OR PERFORMANCE OF THIS PROGRAM MATERIAL.

Program Description II

Sketch(es)

Given: a, b, c, d, r₁ and r₂.

determine x, y, α and β

$$\tan \phi = \frac{b_1 - a_1}{d_1 - c_1}$$

$$\overline{O_1O_2} = \frac{d_1 - c_1}{\cos \phi}$$

$$\sin \theta = \frac{r_2 - r_1}{\overline{O_1O_2}}$$

$$\overline{OO_1} = \frac{r_1}{\sin \theta}$$

$$x = a_1 - \overline{OO_1} \sin \phi$$

$$y = c_1 - \overline{OO_1} \cos \phi$$

$$\alpha = 90^\circ + \phi - \theta$$

$$\beta = 90^\circ - \phi - \theta$$

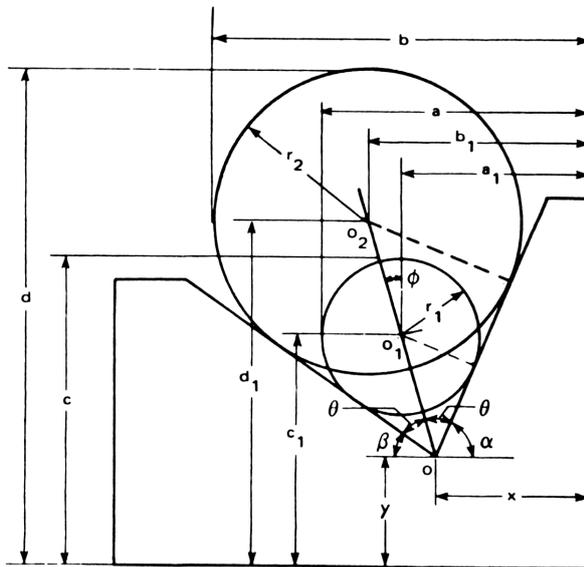

Special case for φ = 0, then:

$$\alpha = \beta$$

$$\overline{O_1O_2} = d_1 - c_1$$

$$\sin \theta = \frac{r_2 - r_1}{d_1 - c_1}$$

$$y = c_1 - \frac{r_1}{\sin \theta}$$

Solution for "V" Notch

Sample #1 Given: a = 1.500" d = 2.800"
 b = 2.125" r₁ = .4375"
 c = 1.750" r₂ = .875"

Keystrokes 1.5[+], 2.125[+], 1.75[+], 2.8[A], .4375[+], .875[f] [A]

▶; x = .875"; Y=.700"; a = 63.942°; β = 29.901°

Sample #2 [where φ = zero] a = 1.500" d = 2.900"
 b = 1.900" r₁ = .500"
 c = 1.800" r₂ = .900"

Program Description II

Sketch(es)

Given: b, c, d, r_1 and r_2 , determine C, D, ϕ and R_1

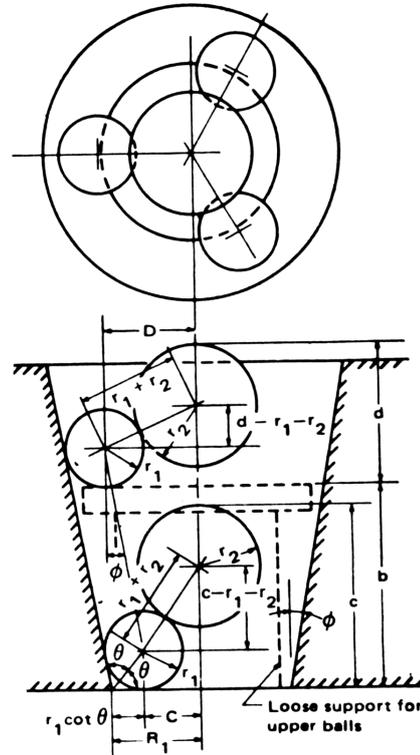

$$C^2 = 2c(r_1 + r_2) - c^2$$

$$D^2 = 2d(r_1 + r_2) - d^2$$

$$\tan \theta = \frac{D - C}{b}$$

$$2\theta = 90^\circ + \phi$$

$$R_1 = C + r_1 \cot \theta$$

Solution for Finding Internal Taper

Sample #1 Given: $b = 1.150''$ $r_1 = .21875''$
 $c = 1.050''$ $r_2 = .34375''$
 $d = .800''$

Keystrokes

1.15[+], 1.05[+], .8[+], .21875[A], .34375[f][A]

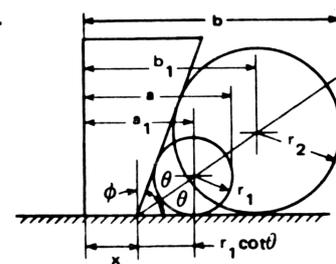

B; $c = .2806''$, $d = .5099''$, $\phi = 11.2753^\circ$, $\theta = 50.6377^\circ$ $R_1 = .4601''$

Given: a, b, r_1 and r_2 , determine x and ϕ

$$\tan \theta = \frac{r_2 - r_1}{b_1 - a_1}$$

$$\phi = 90^\circ - 2\theta$$

$$x = a_1 - r_1 \cot \theta$$

Solution for Finding External Tapers, Case #1

Sample #2 Given: $a = .820''$ $r_1 = .21875''$
 $b = 1.430''$ $r_2 = .46875''$

Keystrokes

.82[+] 1.43[+] .21875[+] .46875[A]

C; $\phi = 20.444^\circ$, $x = .28625''$

Program Description II

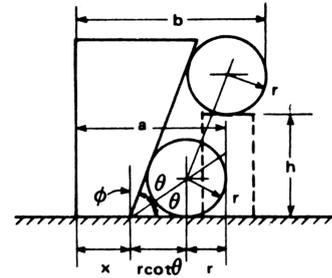

Sketch(es)

Given: a, b, r and h, determine x and ϕ

$$\tan 2\theta = \frac{h}{b-a}$$

$$\phi = 90 - 2\theta$$

$$x = a - r - r \cot \theta$$

Solution for Finding External Tapers, Case #2

Sample #3 Given: a = .830" r = .21875"
 b = 1.070" h = .5625"

Keystrokes

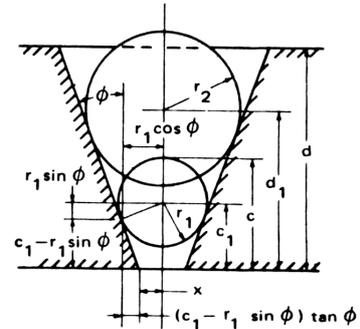

.83[+] 1.07[+] .21875[+] .5625[A]

Δ ; $\phi = 23.106^\circ$, x = .28008"

Given: c, d, r₁ and r₂, determine x and ϕ

$$\sin \phi = \frac{r_2 - r_1}{d_1 - c_1}$$

$$x = \frac{r_1}{\cos \phi} - c_1 \tan \phi$$

Solution for Finding External Tapers Case #3

Sample #4 Given: c = .625" r₁ = .250"
 d = 1.250" r₂ = .4375"

Keystrokes

.625[+] 1.25[+] .25[+] .4375[A]

Program Description I

Program Title Points of Tangency With Circles and Arcs

Contributor's Name David Stedman

Address 15950 Oakridge Road

City Morgan Hill **State** California **Zip Code** 95057

Program Description, Equations, Variables

These programs will accurately locate points of tangency between straight lines and arcs, between straight lines and a circle, and between two circles and a straight line.

Operating Limits and Warnings

All angular outputs are in decimal degrees, →H.MS may be used to convert to degrees, minutes, and seconds.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

Program Description I

Program Title Line-Line Intersection/Grid Points

Contributor's Name David Stedman

Address 15950 Oakridge Road

City Morgan Hill

State Ca.

Zip Code 95037

Program Description, Equations, Variables

This card will calculate the point of intersection of two lines and the Cartesian coordinates of points in other systems.

See page two for equations and sketch.

Operating Limits and Warnings

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR MAKES ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND WITH REGARD TO THIS PROGRAM MATERIAL, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. NEITHER HP NOR THE CONTRIBUTOR SHALL BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH OR ARISING OUT OF THE FURNISHING, USE OR PERFORMANCE OF THIS PROGRAM MATERIAL.

Program Description II

EQUATIONS

For both programs, the user specifies the angle from horizontal to lines in the problem. Slope will be converted to angle by the relation $\theta = \tan^{-1}(\text{slope})$. Given two points (x_1, y_1) and (x_2, y_2) on the line, the angle is

$$\theta = \tan^{-1} \left(\frac{y_2 - y_1}{x_2 - x_1} \right)$$

Line-Line Intersection

(x, y) = Coordinates of point of intersection

(x_1, y_1) = Coordinates of point on line one

(x_2, y_2) = Coordinates of point on line two

θ_1 = Angle from horizontal to line one

θ_2 = Angle from horizontal to line two

Grid Points

(x_0, y_0) = Coordinates of 0, 0 grid point

h_1, h_2 = Grid system unit vectors

θ_1 = Angle to h_1 unit vector

θ_2 = Angle to h_2 unit vector

(x_{ij}, y_{ij}) = Coordinates of i, j grid point

Equations:

Line-Line Intersection

$$x = \frac{x_1 \tan \theta_1 - x_2 \tan \theta_2 + y_2 - y_1}{\tan \theta_1 - \tan \theta_2}$$

$$y = y_1 + (x - x_1) \tan \theta_1$$

Grid Points

$$x_{ij} = x_0 + j\Delta x_1 + i\Delta x_2$$

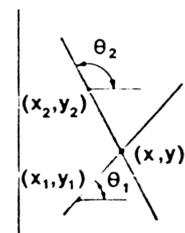

$$y_{ij} = y_0 + j\Delta y_1 + i\Delta y_2$$

$$\Delta x_1 = h_1 \cos \theta_1$$

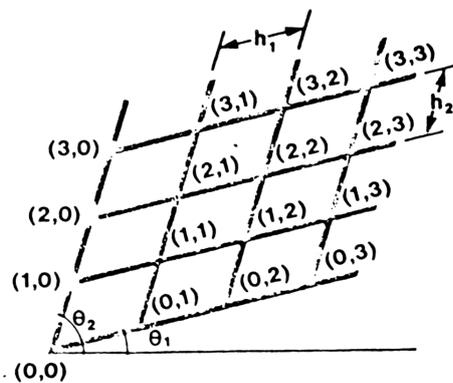

$$\Delta y_1 = h_1 \sin \theta_1$$

$$\Delta x_2 = h_2 \cos \theta_2$$

$$\Delta y_2 = h_2 \sin \theta_2$$

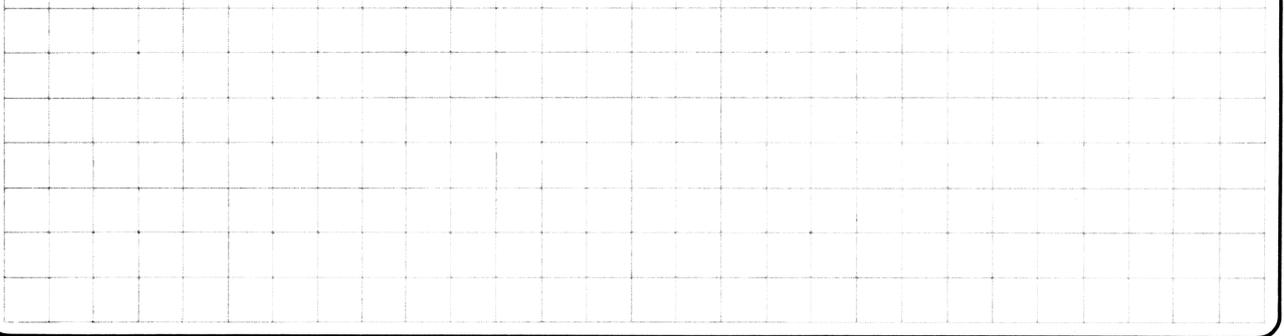

Line-Line Intersection

Grid Points

Program Description II

Sketch(es)

Sample Problem(s)

Example 1. Find the point of intersection of two lines passing through (10,20) (40,30) and (-10,30) (50,10).

$10 \uparrow 20 \uparrow 40 \uparrow 30$ f A 10 CHS $\uparrow 30 \uparrow 50 \uparrow 10$ f B $\rightarrow 15.00, 21.67$

Example 2. Find the intersection of a line through (0,0) with slope 2.8 and the line with equation $x = 4.5$.

$4.5 \uparrow 0 \uparrow 0 \uparrow 2.8$ f E $\rightarrow 12.60$

Example 3. For a grid with its origin at (1,1) and vectors 2 and 3 units long at 30 and 90 degrees, respectively, find the cartesian coordinates for the following grid coordinates: (0,0), (1,0), (2,0), (0,1), (0,2), (1,1), (1.5,3).

$1 \uparrow 1 \uparrow 2 \uparrow 3$ C $30 \uparrow 90$ D $0 \uparrow 0$ E $\rightarrow 1.00, 1.00$

$1 \uparrow 0$ E $\rightarrow 1.00, 4.00$

$2 \uparrow 0$ E $\rightarrow 1.00, 7.00$

$0 \uparrow 1$ E $\rightarrow 2.73, 2.00$

$0 \uparrow 2$ E $\rightarrow 4.46, 3.00$

$1 \uparrow 1$ E $\rightarrow 2.73, 5.00$

$1.5 \uparrow 3$ E $\rightarrow 6.20, 8.50$

Program Description I

Program Title Points on a Straight Line

Contributor's Name DAVID STEDMAN

Address 15950 OAKRIDGE ROAD

City MORGAN HILL, **State** CALIFORNIA **Zip Code** 95037

Program Description, Equations, Variables THIS PROGRAM CALCULATES THE COORDINATES OF EQUIDISTANT POINTS ON A STRAIGHT LINE.

DATA:

- THE STARTING POINT [CALLED 1]

$$P_1 = [X_1, Y_1]$$

- THE ANGLE OF THE STRAIGHT LINE WITH THE POSITIVE X AXIS: θ_1
- THE DISTANCE BETWEEN TWO CONSECUTIVE POINTS IN THE DIRECTION OF THE STRAIGHT LINE: H
- THE NUMBER OF POINTS N, FOR AUTOMATIC CALCULATION [THE POINT 1 BEING INCLUDED].

POINT P_i IS CALCULATED BY:

$$X_i = x_1 + (i-1) H \cos \theta_1$$

$$Y_i = Y_1 + (i-1) H \sin \theta_1$$

THE AUTO OPTION IS PROVIDED FOR OUTPUT OF THE ORDERED PAIRS $[X_n, Y_n]$ THROUGH PRINT COMMANDS. IF AUTO IS NOT SELECTED, THE VALUES WILL BE OUTPUT ONE AT A TIME BY THE USE OF R/S.

RESULTS: AT YOUR OPTION:

- AUTOMATICALLY INCREMENT i [$i=1,2,\dots,n$] FOR X_i AND Y_i COORDINATES.
- CALCULATE COORDINATES X_i AND Y_i OF ONE POINT i .

NOTE: BECAUSE POINTS CAN BE REQUESTED INDIVIDUALLY IT IS POSSIBLE TO CALCULATE POINTS SUCH AS P_{-1} , P_0 , and P_{-3} etc...CHAINING OF ORDERED PAIRS IS AUTOMATIC AFTER RESULT $[X_1, Y_1]$, Y_1 HAVING BEEN DISPLAYED.

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

Program Description II

EXAMPLE : STRAIGHT LINE DESIGNATED BY:

$$P_1 (X_1 = 10, Y_1 = 10, \theta = -30^\circ, H = 20)$$

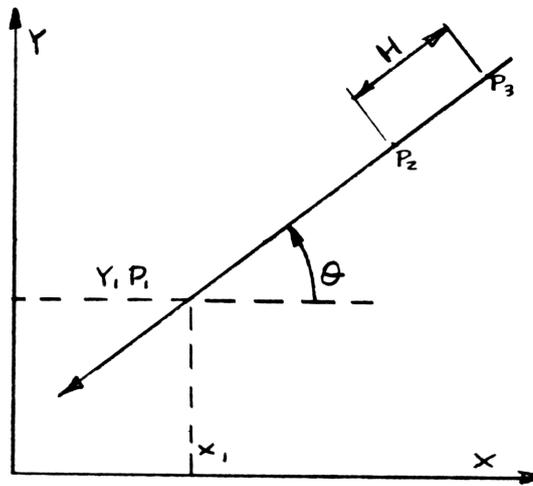

- AUTOMATIC CALCULATION OF 6 POINTS (N=6)

i	1	2	3	4	5	6
X _i	10.0000	27.3205	44.6410	61.9615	79.2820	96.6025
Y _i	10.0000	0.0000	-10.0000	-20.0000	-30.0000	-40.0000

- POINT i AT REQUEST:

$$P_0 (i=0) , x = -7.321, y = 20.000$$

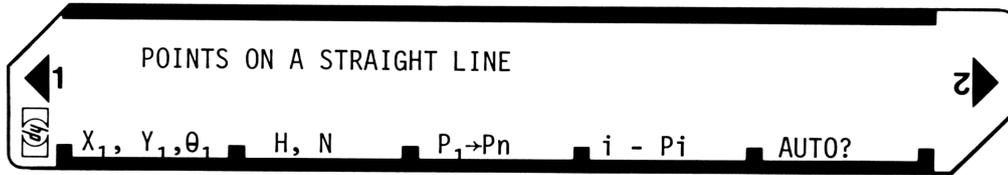

$$P_{-1} (i=-1) x = -24.641, y = 30.000 \text{ ETC...}$$

Program Description I

Program Title Grid of Points: Calculates all points

Contributor's Name DAVID STEDMAN

Address 15950 OAKRIDGE ROAD

City MORGAN HILL,

State CALIFORNIA

Zip Code 95037

Program Description, Equations, Variables THIS PROGRAM CALCULATES THE X AND Y COORDINATES, ALL THE POINTS OF A GRID DEFINED AS FOLLOWS:

DATA: a) FIRST DIRECTION OF A GRID:

- ANGLE θ , WITH THE POSITIVE X AXIS
- ALGEBRAIC DISTANCE BETWEEN EACH POINT H, IN THIS DIRECTION.
- TOTAL NUMBER N , OF POINTS (INCLUDING THE FIRST ONE)

b) SECOND DIRECTION OF THE GRID:

- ANGLE θ_2 WITH THE POSITIVE X AXIS.
- ALGEBRAIC DISTANCE BETWEEN TWO POINTS H_2 IN THAT DIRECTION.
- TOTAL NUMBER N_2 OF POINTS (INCLUDING THE FIRST ONE)

c) STARTING POINT (NOTED 1) WITH COORDINATES X AND Y.

THE CALCULATION IS INCREMENTAL FROM POINT 1 TO POINT (N_1N_2) FOR EACH POINT WE FIND:

- THE INDEX i , THE X_i and Y_i COORDINATES

AUTOMATIC STOP (THE END) IS INDICATED BY A FLASHING DISPLAY OF ZEROS.

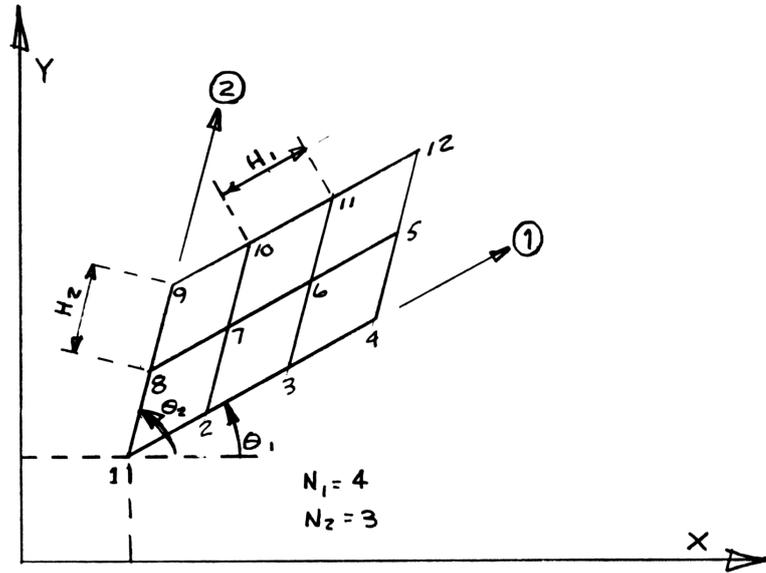

Operating Limits and Warnings

Program Description I

Program Title Grid of Points: Calculate Discrete Points

Contributor's Name DAVID STEDMAN

Address 15950 OAKRIDGE ROAD

City MORGAN HILL, **State** CALIFORNIA **Zip Code** 95037

Program Description, Equations, Variables THIS PROGRAM COMPLEMENTS "SOLUTION TO GEOMETRIC PROBLEMS, PART #7," "GRID OF POINTS: CALCULATE ALL POINTS". IT ALLOWS THE CALCULATION OF SPECIFIED POINTS OF A GRID DEFINED AS FOLLOWS:

DATA:

a) FIRST DIRECTION:

- ANGLE θ , (RELATED TO POSITIVE X AXIS).
- DISTANCE BETWEEN EACH POINT H, IN THIS DIRECTION.

b) SECOND DIRECTION:

- ANGLE θ_2
- AND H_2

c) STARTING POINT (ORIGIN OF THE GRID): 11

WE GIVE X_{11} AND Y_{11} .

FORMULAS: THE FIRST DIRECTION REPRESENTS THE LINES OF THE SECOND COLUMNS.

$$X_{ij} = X_1 + (j-1) \Delta X_1 + (i-1) \Delta X_2$$

$$Y_{ij} = Y_1 + (j-1) \Delta Y_1 + (i-1) \Delta Y_2$$

$$\Delta X_1 = H_1 \cos \theta_1$$

$$\Delta Y_1 = H_1 \sin \theta_1$$

$$\Delta X_2 = H_2 \cos \theta_2$$

$$\Delta Y_2 = H_2 \sin \theta_2$$

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

Program Description II

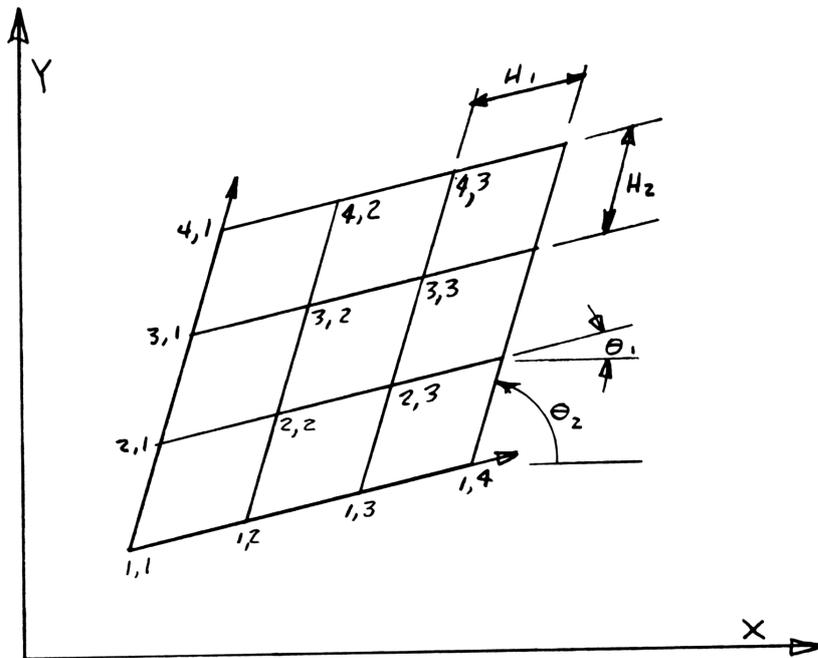

EXAMPLE :

FIRST DIRECTION $\theta_1 = 0^\circ$, $H_1 = 10$

SECOND DIRECTION $\theta_2 = 90^\circ$, $H_2 = 20$

$X_{11} = 0$, $Y_{11} = 0$

i,j	1,1	1,2	2,1	-1,3
X _{ij}	0.0000	10.0000	0.0000	20.0000
Y _{ij}	0.0000	0.0000	20.0000	-40.0000

0 (†) 10 (A) 90 (†) 20 (B) 0 (†) 0 (C) 1 (†) 2 (D) -----> 10.0000

R/S-----> 0.0000

etc.

Program Description I

Program Title Tangent Circle to Two Straight Lines with a Given Radius

Contributor's Name David Stedman

Address 15950 Oakridge Road

City Morgan Hill, **State** California **Zip Code** 95037

Program Description, Equations, Variables THIS PROBLEM CALCULATES THE X AND Y COORDINATES OF THE CENTER OF A CIRCLE WITH A GIVEN RADIUS. THIS CIRCLE BEING TANGENT TO TWO GIVEN STRAIGHT LINES. IN THE MORE GENERAL CASE, THERE ARE FOUR CENTER SOLUTIONS TO THIS PROBLEM.

INPUT SUCCESSIVELY:

- THE RADIUS OF THE CIRCLE TO BE DETERMINED: R_f [A]

- EACH OF THE STRAIGHT LINES IN THE FOLLOWING MANNER:

DEFINE THE STRAIGHT LINE BY POINT AND ANGLE, THE INDICATED

POSITION OF THE CIRCLE TO BE DETERMINED BY REFERENCE TO

THE STRAIGHT LINE:

[B]: CIRCLE ABOVE THE STRAIGHT LINES

[C]: CIRCLE BELOW THE STRAIGHT LINES

[D]: CIRCLE TO THE LEFT OF THE STRAIGHT LINES

[E]: CIRCLE TO THE RIGHT OF THE STRAIGHT LINES

THESE MODIFIERS ALLOW THE SHIFTING OF THE TWO INITIAL STRAIGHT LINES, THE CALCULATION IS THEN THE ONE OF THE INTERSECTION OF TWO STRAIGHT LINES.

LINE 1 = $[X_1, Y_1, \theta_1]$

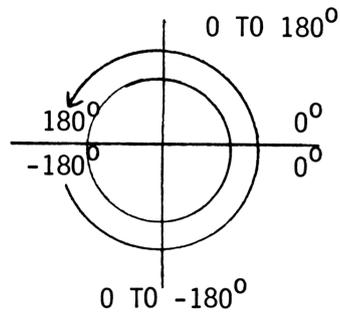

(X_i, Y_i) SHIFTED POINTS

LINE 2 = $[X_2, Y_2, \theta_2]$

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR MAKES ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND WITH REGARD TO THIS PROGRAM MATERIAL, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. NEITHER HP NOR THE CONTRIBUTOR SHALL BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH OR ARISING OUT OF THE FURNISHING, USE OR PERFORMANCE OF THIS PROGRAM MATERIAL.

ALL ANGLES MUST BE INPUT FOLLOWING THESE CONVENTIONS:

FORMULAS USED:

$$X = \frac{(Y_2 - Y_1) \cos \theta_1 \cos \theta_2 + X_1 \sin \theta_1 \cos \theta_2 - X_2 \sin \theta_2 \cos \theta_1}{\sin (\theta_1 - \theta_2)}$$

$$Y = Y_1 + (X - X_1) \tan \theta_1$$

$$Y = Y_2 + (X - X_2) \tan \theta_2$$

Program Description II

Sketch(es)

Sample Problem(s)

$$D_1 = [10, 20, 30^\circ] \quad Rf = 10$$

$$D_2 = [-20, 30, -60^\circ]$$

THE PROGRAM BEING EXECUTED FOUR TIMES WILL YIELD:

POSITION OF CIRCLE		X	Y
D ₁	D ₂		
ABOVE	B	-4.5096	23.1699
BELOW	C	-11.8301	-4.1506
LEFT	D	-21.8301	13.1699
RIGHT	E	5.4904	5.8494

Solution(s)

10 (A) 10 (↑) 20 (↑) 30 (B) 20 (CHS) (↑) 30 (↑) 60 (CHS)

(B) (f) (A) -----> -4.5096

(f) (B) -----> 23.1699

Program Description I

Program Title **DISTANCE BETWEEN LINES IN SPACE**

Contributor's Name **ROBERT H. MANSFIELD**

Address **1411 E. MISSION**

City **SPOKANE** State **WASHINGTON** Zip Code **99202**

Program Description, Equations, Variables **GIVEN TWO LINES, EACH DEFINED BY ANY TWO POINTS, PROGRAM CALCULATES SHORTEST DISTANCE BETWEEN THE TWO LINES. (THIS PROGRAM WAS WRITTEN TO DETERMINE THE CLEARANCE BETWEEN ELECTRICAL DISTRIBUTION CIRCUITS AND GUY WIRES OR SUPPORTING STRUCTURES.)**

PROGRAM TAKES LINES DEFINED BY THE TWO-POINT FORM,

$$\text{Two-point form: } \frac{x - x_1}{x_2 - x_1} = \frac{y - y_1}{y_2 - y_1} = \frac{z - z_1}{z_2 - z_1}$$

CHANGES THEM TO THE POINT-DIRECTION FORM,

$$\text{Point-direction form: } \frac{x - x_1}{a} = \frac{y - y_1}{b} = \frac{z - z_1}{c}$$

AND THE SHORTEST DISTANCE (D) IS CALCULATED BY:

$$D = \frac{\begin{vmatrix} x_2 - x_1 & y_2 - y_1 & z_2 - z_1 \\ a_1 & b_1 & c_1 \\ a_2 & b_2 & c_2 \end{vmatrix}}{\sqrt{\begin{vmatrix} b_1 & c_1 \\ b_2 & c_2 \end{vmatrix}^2 + \begin{vmatrix} c_1 & a_1 \\ c_2 & a_2 \end{vmatrix}^2 + \begin{vmatrix} a_1 & b_1 \\ a_2 & b_2 \end{vmatrix}^2}}$$

Operating Limits and Warnings

This program has been verified only with respect to the numerical example given in *Program Description II*. User accepts and uses this program material AT HIS OWN RISK, in reliance solely upon his own inspection of the program material and without reliance upon any representation or description concerning the program material.

NEITHER HP NOR THE CONTRIBUTOR MAKES ANY EXPRESS OR IMPLIED WARRANTY OF ANY KIND WITH REGARD TO THIS PROGRAM MATERIAL, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. NEITHER HP NOR THE CONTRIBUTOR SHALL BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES IN CONNECTION WITH OR ARISING OUT OF THE FURNISHING, USE OR PERFORMANCE OF THIS PROGRAM MATERIAL.

Program Description II

Sketch(es)

Sample Problem(s) GIVEN TWO LINES IN THREE-DIMENSIONAL SPACE:

LINE #1 DEFINED BY POINTS $x_1, y_1, z_1 = 30, 14, 10$ AND
 $x'_1, y'_1, z'_1 = 0, 46, 10$;

LINE #2 DEFINED BY POINTS $x_2, y_2, z_2 = 124, 50, -30$ AND
 $x'_2, y'_2, z'_2 = 0, 36, 16$.

CALCULATE THE SHORTEST DISTANCE BETWEEN THE TWO LINES.

CHANGE LINE #1 BY MOVING x'_1, y'_1, z'_1 TO 5, 48, 7 AND
 REPEAT THE DISTANCE CALCULATION.

Solution(s) KEYSTROKES:

30↑14↑10[A] 0↑46↑10[B] 124↑50↑30[CHS][C] 0↑36↑16[D][E] → 2.59
 (SHORTEST DISTANCE BETWEEN LINES IS 2.59 UNITS.)

CHANGE LINE #1 AND RECALCULATE DISTANCE:

5↑48↑7[B][E] → 3.02
 (SHORTEST DISTANCE IS NOW 3.02 UNITS.)

NOTES

NOTES

Hewlett-Packard Software

In terms of power and flexibility, the problem-solving potential of the Hewlett-Packard line of fully programmable calculators is nearly limitless. And in order to see the practical side of this potential, we have several different types of software to help save you time and programming effort. Every one of our software solutions has been carefully selected to effectively increase your problem-solving potential. Chances are, we already have the solutions you're looking for.

Application Pacs

To increase the versatility of your fully programmable Hewlett-Packard calculator, HP has an extensive library of "Application Pacs". These programs transform your HP-67 and HP-97 into specialized calculators in seconds. Each program in a pac is fully documented with commented program listing, allowing the adoption of programming techniques useful to each application area. The pacs contain 20 or more programs in the form of prerecorded cards, a detailed manual, and a program card holder. Every Application Pac has been designed to extend the capabilities of our fully programmable models to increase your problem-solving potential.

You can choose from:

Statistics
Mathematics
Electrical Engineering
Business Decisions
Clinical Lab and Nuclear Medicine

Mechanical Engineering
Surveying
Civil Engineering
Navigation

Users' Library

The main objective of our Users' Library is dedicated to making selected program solutions contributed by our HP-67 and HP-97 users available to you. By subscribing to our Users' Library, you'll have at your fingertips, literally hundreds of different programs. No longer will you have to: research the application; program the solution; debug the program; or complete the documentation. Simply key your program to obtain your solution. In addition, programs from the library may be used as a source of programming techniques in your application area.

A one-year subscription to the Library costs \$9.00. You receive: a catalog of contributed programs; catalog updates; and coupons for three programs of your choice (a \$9.00 value).

Users' Library Solutions Books

Hewlett-Packard recently added a unique problem-solving contribution to its existing software line. The new series of software solutions are a collection of programs provided by our programmable calculator users. Hewlett-Packard has currently accepted over 6,000 programs for our Users' Libraries. The best of these programs have been compiled into 40 Library Solutions Books covering 39 application areas (including two game books).

Each of the Books, containing up to 15 programs without cards, is priced at \$10.00, a savings of up to \$35.00 over single copy cost.

The Users' Library Solutions Books will compliment our other applications of software and provide you with a valuable new tool for program solutions.

GEOMETRY

These programs calculate basic geometry problems, mostly plane geometry. Calculations include points, lines, circles, intersections, distances, angles, etc.

SINE PLATE SOLUTIONS

V NOTCHES AND LONG RADII

INTERNAL AND EXTERNAL TAPERS

POINTS OF TANGENCY WITH CIRCLES AND ARCS

LINE-LINE INTERSECTION/GRID POINTS

POINTS ON A STRAIGHT LINE

GRID OF POINTS: CALCULATES ALL POINTS

GRID OF POINTS: CALCULATES DISCRETE POINTS

TANGENT CIRCLE TO TWO STRAIGHT LINES WITH A GIVEN RADIUS

DISTANCE BETWEEN LINES IN SPACE
